

The Power of We™

Avaya E169 Media Station

Redefine the Desktop for Your Mobile and Remote Workers

Use the Avaya E169 Media Station as a standard SIP desk phone on its own. Or, dock your Apple iOS or Android smartphone or tablet.

Using personal smartphones and tablets for business (known as “Bring Your Own Device”) is practiced almost everywhere today. From small businesses to the largest global enterprises, many employees rely on their own mobile devices to stay connected, productive, and efficient while working. Now, when on-the-go employees are in the office, the Avaya E169 Media Station enables them to continue to use their mobile device.

Use the Avaya E169 Media Station as a standard SIP desk phone on its own. Or, dock your Apple iOS or Android smartphone or tablet, log in via the Media Station app, and turn your mobile device into an enterprise-grade communications tool. It features superb audio quality, a secure connection to your network, and the calling features you need most – all via an easy-to-use interface on your smart device.

Capabilities

Your Favorite Mobile Device – At Its Best

Taking lengthy voice and video calls from your smartphone can be frustrating – especially when in the office. Audio quality and the ergonomics of mobile devices are less than ideal for doing business. When you are at your desk, customers, colleagues and suppliers expect high quality interactions. With the Avaya E169 Media Station, that’s exactly what they get.

With six wideband, wrap-around speakers and four high definition microphones, hands-free conversations are astonishingly clear for everyone. Acoustic echo cancellation and spatial audio elevate that experience. The included USB-connected handset has a comfortable, padded earpiece, convenient dial pad, and delivers equally exceptional sound quality.

Go Ahead, Dock Your Own Device

On its own, the Avaya E169 Media Station is an excellent, standards-based SIP desk phone, offering great audio quality and all the basic call handling features. But it also quickly and easily docks select Apple iOS and Android* smartphones and tablets. Simply change out the included docking inserts and wired connectors (using 30-pin, Apple Lightning and Micro USB connectors) and you're good to go. Download the Avaya Media Station app and tap to perform the most frequently used calling functions. Use the handset or speakerphone for cellular calls. And you'll be keeping your mobile device charged for when you head back out on the road. You also can use the included Bluetooth connection to control your E169 Media Station from your smart device without it being docked.

Continue to use the Avaya mobile and video apps on your smart devices – such as Avaya one-X® Mobile, Avaya Communicator, Avaya Scopia® Video Collaboration, and Avaya Flare®

Experience – through the Bluetooth profiles while docked in the E169 in the office. You can even use the handset or speakerphone included with the E169 Media Station when using these apps.

Best of all, you'll continue to use the mobile device you're most often connected to – *your own*.

Think Beyond the Mobile Worker

Clearly mobile workers will appreciate the Avaya E169 Media Station while in the office. Full- and part-time remote workers also can benefit from the

E169 in their home office. A secure connection to your corporate network (via the Avaya Session Border Controller) delivers a communications experience that's on par with what they get in the office.

Use the E169 Media Station as a conference phone in an executive office. The exceptional acoustic qualities, sleek and modern design, and simple to use interface (with or without a docked smartphone or tablet) puts the E169 at home in virtually any environment.

Go Device-less

The Avaya E169 Media Station is a standalone enterprise-class SIP desk phone, offering basic call handling features such as call, transfer, mute, conference, and more – with or without a smart device docked or connected via Bluetooth.

Just What the IT Staff Ordered

IT staff worldwide are struggling with how best to address the BYOD trend. Now they have the answer. The E169 Media Station connects to your network via open, standards-based Session Initiation Protocol (SIP). To IT staff that means it looks like any other SIP endpoint on the network. So they can manage E169 Media Stations locally or remotely, within the standard Avaya endpoint management architecture. And it's within the company firewall, maintaining secure communications.

The Avaya E169 Media Station is compatible with the flagship Avaya communications and collaboration platforms: Avaya Aura® 6.2 FP3 Platform and greater, and Avaya IP Office™ 9.0.3 FP Platform. E169 Media Stations are Avaya global phones (without English language text on the faceplate).
