Notice

While reasonable efforts have been made to ensure that the information in this document is complete and accurate at the time of printing, Avaya assumes no liability for any errors. Avaya reserves the right to make changes and corrections to the information in this document without the obligation to notify any person or organization of such changes.

Documentation disclaimer

"Documentation" means information published by Avaya in varying mediums which may include product information, operating instructions and performance specifications that Avaya may generally make available to users of its products and Hosted Services. Documentation does not include marketing materials. Avaya shall not be responsible for any modifications, additions, or deletions to the original published version of documentation unless such modifications, additions, or deletions were performed by Avaya. End User agrees to indemnify and hold harmless Avaya, Avaya's agents, servants and employees against all claims, lawsuits, demands and judgments arising out of, or in connection with, subsequent modifications, additions or deletions to this documentation, to the extent made by End User.

Link disclaimer

Avaya is not responsible for the contents or reliability of any linked websites referenced within this site or documentation provided by Avaya. Avaya is not responsible for the accuracy of any information, statement or content provided on these sites and does not necessarily endorse the products, services, or information described or offered within them. Avaya does not guarantee that these links will work all the time and has no control over the availability of the linked pages.

Warranty

Avaya provides a limited warranty on Avaya hardware and software. Refer to your sales agreement to establish the terms of the limited warranty. In addition, Avaya's standard warranty language, as well as information regarding support for this product while under warranty is available to Avaya customers and other parties through the Avaya Support website: <https://support.avaya.com/helpcenter/getGenericDetails?detailId=C20091120112456651010> under the link "Warranty & Product Lifecycle" or such successor site as designated by Avaya. Please note that if You acquired the product(s) from an authorized Avaya Channel Partner outside of the United States and Canada, the warranty is provided to You by said Avaya Channel Partner and not by Avaya.

Licenses

THE SOFTWARE LICENSE TERMS AVAILABLE ON THE AVAYA WEBSITE, [HTTPS://SUPPORT.AVAYA.COM/LICENSEINFO](https://support.avaya.com/licenseinfo), UNDER THE LINK "AVAYA SOFTWARE LICENSE TERMS (Avaya Products)" OR SUCH SUCCESSOR SITE AS DESIGNATED BY AVAYA, ARE APPLICABLE TO ANYONE WHO DOWNLOADS, USES AND/OR INSTALLS AVAYA SOFTWARE, PURCHASED FROM AVAYA INC., ANY AVAYA AFFILIATE, OR AN AVAYA CHANNEL PARTNER (AS APPLICABLE) UNDER A COMMERCIAL AGREEMENT WITH AVAYA OR AN AVAYA CHANNEL PARTNER. UNLESS OTHERWISE AGREED TO BY AVAYA IN WRITING, AVAYA DOES NOT EXTEND THIS LICENSE IF THE SOFTWARE WAS OBTAINED FROM ANYONE OTHER THAN AVAYA, AN AVAYA AFFILIATE OR AN AVAYA CHANNEL PARTNER; AVAYA RESERVES THE RIGHT TO TAKE LEGAL ACTION AGAINST YOU AND ANYONE ELSE USING OR SELLING THE SOFTWARE WITHOUT A LICENSE. BY INSTALLING, DOWNLOADING OR USING THE SOFTWARE, OR AUTHORIZING OTHERS TO DO SO, YOU, ON BEHALF OF YOURSELF AND THE ENTITY FOR WHOM YOU ARE INSTALLING, DOWNLOADING OR USING THE SOFTWARE (HEREINAFTER REFERRED TO INTERCHANGEABLY AS "YOU" AND "END USER"), AGREE TO THESE TERMS AND CONDITIONS AND CREATE A BINDING CONTRACT BETWEEN YOU AND AVAYA INC. OR THE APPLICABLE AVAYA AFFILIATE ("AVAYA").

Avaya grants You a license within the scope of the license types described below, with the exception of Heritage Nortel Software, for

which the scope of the license is detailed below. Where the order documentation does not expressly identify a license type, the applicable license will be a Designated System License. The applicable number of licenses and units of capacity for which the license is granted will be one (1), unless a different number of licenses or units of capacity is specified in the documentation or other materials available to You. "Software" means computer programs in object code, provided by Avaya or an Avaya Channel Partner, whether as stand-alone products, pre-installed on hardware products, and any upgrades, updates, patches, bug fixes, or modified versions thereto. "Designated Processor" means a single stand-alone computing device. "Server" means a Designated Processor that hosts a software application to be accessed by multiple users. "Instance" means a single copy of the Software executing at a particular time: (i) on one physical machine; or (ii) on one deployed software virtual machine ("VM") or similar deployment.

License types

Designated System(s) License (DS). End User may install and use each copy or an Instance of the Software only on a number of Designated Processors up to the number indicated in the order. Avaya may require the Designated Processor(s) to be identified in the order by type, serial number, feature key, Instance, location or other specific designation, or to be provided by End User to Avaya through electronic means established by Avaya specifically for this purpose.

Concurrent User License (CU). End User may install and use the Software on multiple Designated Processors or one or more Servers, so long as only the licensed number of Units are accessing and using the Software at any given time. A "Unit" means the unit on which Avaya, at its sole discretion, bases the pricing of its licenses and can be, without limitation, an agent, port or user, an e-mail or voice mail account in the name of a person or corporate function (e.g., webmaster or helpdesk), or a directory entry in the administrative database utilized by the Software that permits one user to interface with the Software. Units may be linked to a specific, identified Server or an Instance of the Software.

Database License (DL). End User may install and use each copy or an Instance of the Software on one Server or on multiple Servers provided that each of the Servers on which the Software is installed communicates with no more than one Instance of the same database.

CPU License (CP). End User may install and use each copy or Instance of the Software on a number of Servers up to the number indicated in the order provided that the performance capacity of the Server(s) does not exceed the performance capacity specified for the Software. End User may not re-install or operate the Software on Server(s) with a larger performance capacity without Avaya's prior consent and payment of an upgrade fee.

Named User License (NU). You may: (i) install and use the Software on a single Designated Processor or Server per authorized Named User (defined below); or (ii) install and use the Software on a Server so long as only authorized Named Users access and use the Software. "Named User", means a user or device that has been expressly authorized by Avaya to access and use the Software. At Avaya's sole discretion, a "Named User" may be, without limitation, designated by name, corporate function (e.g., webmaster or helpdesk), an e-mail or voice mail account in the name of a person or corporate function, or a directory entry in the administrative database utilized by the Software that permits one user to interface with the Software.

Shrinkwrap License (SR). You may install and use the Software in accordance with the terms and conditions of the applicable license agreements, such as "shrinkwrap" or "clickthrough" license accompanying or applicable to the Software ("Shrinkwrap License").

Heritage Nortel Software

"Heritage Nortel Software" means the software that was acquired by Avaya as part of its purchase of the Nortel Enterprise Solutions Business in December 2009. The Heritage Nortel Software is the software contained within the list of Heritage Nortel Products located at <https://support.avaya.com/LicenseInfo> under the link "Heritage Nortel Products" or such successor site as designated by Avaya. For Heritage Nortel Software, Avaya grants Customer a license to use Heritage Nortel Software provided hereunder solely to the extent of the authorized activation or authorized usage level, solely for the

purpose specified in the Documentation, and solely as embedded in, for execution on, or for communication with Avaya equipment. Charges for Heritage Nortel Software may be based on extent of activation or use authorized as specified in an order or invoice.

Copyright

Except where expressly stated otherwise, no use should be made of materials on this site, the Documentation, Software, Hosted Service, or hardware provided by Avaya. All content on this site, the documentation, Hosted Service, and the product provided by Avaya including the selection, arrangement and design of the content is owned either by Avaya or its licensors and is protected by copyright and other intellectual property laws including the sui generis rights relating to the protection of databases. You may not modify, copy, reproduce, republish, upload, post, transmit or distribute in any way any content, in whole or in part, including any code and software unless expressly authorized by Avaya. Unauthorized reproduction, transmission, dissemination, storage, and or use without the express written consent of Avaya can be a criminal, as well as a civil offense under the applicable law.

Third Party Components

“Third Party Components” mean certain software programs or portions thereof included in the Software or Hosted Service may contain software (including open source software) distributed under third party agreements (“Third Party Components”), which contain terms regarding the rights to use certain portions of the Software (“Third Party Terms”). As required, information regarding distributed Linux OS source code (for those products that have distributed Linux OS source code) and identifying the copyright holders of the Third Party Components and the Third Party Terms that apply is available in the products, Documentation or on Avaya’s website at: <https://support.avaya.com/Copyright> or such successor site as designated by Avaya. The open source software license terms provided as Third Party Terms are consistent with the license rights granted in these Software License Terms, and may contain additional rights benefiting You, such as modification and distribution of the open source software. The Third Party Terms shall take precedence over these Software License Terms, solely with respect to the applicable Third Party Components to the extent that these Software License Terms impose greater restrictions on You than the applicable Third Party Terms.

Preventing Toll Fraud

“Toll Fraud” is the unauthorized use of your telecommunications system by an unauthorized party (for example, a person who is not a corporate employee, agent, subcontractor, or is not working on your company's behalf). Be aware that there can be a risk of Toll Fraud associated with your system and that, if Toll Fraud occurs, it can result in substantial additional charges for your telecommunications services.

Avaya Toll Fraud intervention

If You suspect that You are being victimized by Toll Fraud and You need technical assistance or support, call Technical Service Center Toll Fraud Intervention Hotline at +1-800-643-2353 for the United States and Canada. For additional support telephone numbers, see the Avaya Support website: <https://support.avaya.com> or such successor site as designated by Avaya.

Trademarks

The trademarks, logos and service marks (“Marks”) displayed in this site, the Documentation, Hosted Service(s), and product(s) provided by Avaya are the registered or unregistered Marks of Avaya, its affiliates, or other third parties. Users are not permitted to use such Marks without prior written consent from Avaya or such third party which may own the Mark. Nothing contained in this site, the Documentation, Hosted Service(s) and product(s) should be construed as granting, by implication, estoppel, or otherwise, any license or right in and to the Marks without the express written permission of Avaya or the applicable third party.

Avaya is a registered trademark of Avaya Inc.

All non-Avaya trademarks are the property of their respective owners. Linux® is the registered trademark of Linus Torvalds in the U.S. and other countries.

Downloading Documentation

For the most current versions of Documentation, see the Avaya Support website: <https://support.avaya.com>, or such successor site as designated by Avaya.

Contact Avaya Support

See the Avaya Support website: <https://support.avaya.com> for product or Hosted Service notices and articles, or to report a problem with your Avaya product or Hosted Service. For a list of support telephone numbers and contact addresses, go to the Avaya Support website: <https://support.avaya.com> (or such successor site as designated by Avaya), scroll to the bottom of the page, and select Contact Avaya Support.

Chapter 1: Avaya D100 overview

This document describes the features and settings available on your Avaya D100 SIP Wireless Terminal.

The D160 handset is feature-rich with telephony, voicemail, button programming, and conference functionality. The D160 delivers high-quality wireless voice communications to employees who roam within a building or campus. It is suitable for users dependent on being reachable and/or having a need for mobile voice and messaging features. The handsets offer multiple soft keys, an integrated speakerphone, headset support, and advanced audio-quality technology for crystal-clear conversations.

Each handset registers to a base station that can support up to eight handsets. The base station has a cell radius of up to 350 feet (100 metres) indoors that you can extend using a repeater, which has an equivalent cell radius.

The following sections contain information on D100 phone functionality, feature support, and capacity and performance.

Chapter 2: D160 handset overview

D160 handset

No.	Label	Description
1	Up/Down keys	Control the speaker and ringer volume. Also allows correction of name and number entry when programming a speed dial button.
2	Mute key	Mute the handset microphone.
3	Soft keys (S1–S4)	Activate the option listed directly above it on the display. The handset contains four soft keys.

Table continues...

No.	Label	Description
4	Off-Hook/Handsfree key	Answer a call or enter handsfree mode.
5	On-Hook key	End a call or exit a menu.
6	Dialpad	Use the dialpad to make calls, to enter contact phone numbers and names, and to navigate through contacts and call logs. Note that pressing any key on the dialpad will answer an alerting call.
7	Function keys (F1–F8)	Use the appropriate function key to activate the feature assigned to that key. There are eight configurable function keys.

The telephone keypad cannot be locked, it is active all the time the telephone is powered on. For more information, see the following:

- [Capacity and performance](#) on page 7
- [Powering the handset](#) on page 13

Charge unit

The following image shows the charge unit from three different angles. Note that you can leave the handset in the charge unit when it is not in use.

No.	Label	Description
1	Rechargeable battery slot	To recharge a spare D100 battery.
2	Cradle	To hold the handset upright while it charges.
3	Blue handset LED	To indicate when the handset is placed in the charge unit.
4	Blue battery LED	To indicate when the battery slot is in use.

Table continues...

No.	Label	Description
5	Battery slot tab	To lock the rechargeable battery in place. Press down on this tab to unlock and remove the battery.

Headset

To use a headset, plug the headset into the headset jack during the talk or handsfree modes. While using a headset, you can switch between the talk mode and the handsfree mode, but the headset mode remains active until you unplug the headset.

Display properties

The following sections describe the display properties for the handset LCD as well as the base station, charger, and repeater LEDs.

Handset LCD

The handset LCD consists of three rows. The top row consists of six icons while the remaining two rows consist of 24 alphanumeric characters.

The following tables describe the icons and soft key options visible on the handset LCD.

Status icon	Description
	The handset talk mode icon. This icon is on during an active call and flashes when a call is on hold.

Table continues...

Status icon	Description
	<p>The battery status icon. The number of bars visible on the icon indicates the power level of the battery.</p> <p>When the handset is on the charger, the battery status icon cycles through each icon level from Low to Full until the phone is fully charged.</p> <ul style="list-style-type: none"> • Battery Full = Three bars indicate that the remaining capacity is between 70 and 100%. • Battery Level 2 = Two bars indicate that the remaining capacity is between 40 and 70%. • Battery Level 1 = One bar indicates that the remaining capacity is between 15 and 40%. • Battery Low = Zero bars indicate that the remaining capacity is between 5 and 15%. The icon flashes intermittently. • “Change Battery” Message = The phone is not functional. The remaining capacity is between 0 and 5%.
	<p>The mute icon. Indicates that the ringer is set to Off. In the Vibrate mode, the mute icon is not visible.</p>
	<p>The mail icon. Indicates a new voicemail message.</p>
	<p>The speaker icon. Indicates that the phone is in the handsfree mode.</p>
	<p>The mute icon. Indicates that the microphone is muted.</p>

Soft key	Description
Featur	To access the Feature mode.
Msgs	To access the Voicemail feature.
Redial	To call the most recently called number.
More..	To access more soft key item lists (see below).
CLog	To access the Call Log page.
Dir	To display the system and local phone directories.
Time	To display the current time, accessed using the More.. soft key.

Table continues...

Soft key	Description
Config	To access the configuration menus, such as “User Settings”. See Configuration overview on page 15 for more information. Use the More.. soft key to access the Config option.
123	To switch to numeric input mode, accessed using the More.. soft key.
abc	To switch to alphabetic input mode (the default), accessed using the More.. soft key.

Chapter 3: Setup

Powering the handset

Insert the D160 battery into the handset to begin handset operation.

- Use only the D160-compatible battery.
- Fully charge the battery upon receipt to prolong battery life.

The D160 battery will last approximately 12–13 months with normal usage. Note that unused batteries will slowly lose their charge.

- When the battery no longer holds a charge, dispose of the battery responsibly.

Logging in and out

Only one user can log into a handset at any given time. Use the following methods for logging in to and out of the handset.

Related links

[User login](#) on page 13

[User logout](#) on page 14

User login

Before you begin

You must be logged out before you can log in. When no users are logged in, the handset display reads **Login | Config**.

Note that you can press the **On-Hook** key at any time to exit the menu and cancel the login attempt.

Procedure

1. Press the **Login** soft key.
2. At the prompt, enter the extension number provided by your administrator for that device and press the **OK** soft key. Use the **Del** soft key to make corrections. Press **Cancel** to return to the Idle state.

If you do not enter a number within 30 seconds, the handset returns to the Idle state.

3. The handset then prompts you to enter the password provided by your administrator for that extension number. Use the **>>** soft key to move the cursor to the right, or wait two seconds for the cursor to progress automatically. Note that the password length is limited to seven characters.

If you enter an invalid extension or password, the display reads **Login Failed** for three seconds and then the handset returns to the logged-out state.

Once authorized, the handset returns to an Idle state, but with the user logged in. The handset is now ready for use.

Related links

[Logging in and out](#) on page 13

User logout

Use the following procedure to log a user out of IP Office using the D160 handset.

Before you begin

You must be logged in before you can log out. Note that you can press the **On-Hook** key at any time to exit the menu and cancel the logout attempt.

Procedure

1. In the Idle state, press the **Config** soft key to access the configuration menu list.
2. Use the **Next** or **Prev** soft keys to scroll the menu list to **Logout** and select it.

The display shows a confirmation message that reads **Logout?**

3. Press the **Back** soft key to cancel the logout. Press **OK** to proceed.
4. If you selected **OK**, the handset prompts you to enter the password for that extension.

If you enter an invalid password, the display reads **Logout Failed** for three seconds and then the handset returns to the logged-in, Idle state.

If you enter a valid password, logout completes and the display reads **Login | Config**.

Related links

[Logging in and out](#) on page 13

Chapter 4: Configuration

Configuration overview

Access the configuration menu by pressing the **Config** soft key. You can navigate the menu lists using the **More..** soft key in conjunction with the **Next**, **Prev**, **Back**, and **Select** soft keys.

The first line on the display indicates the status of the current configuration. The second line displays the soft key options.

Note that some menu items require a password in order to gain access. Depending on the menu option, you will require either the DECT PIN ID, the administrator password, or the login/logout password.

If you fail to operate a menu prior to the menu auto timeout, you automatically exit the menu mode.

[Network](#) on page 19

[Phone information](#) on page 20

[Logout](#) on page 21

Changing the ring tone

If ring tone volume is turned off or set to vibrate, you will not hear the ring tone. You can adjust the volume of the ring tone using the **Up** or **Down** keys on the side of the handset.

The following procedure describes how to change the ring tone type, not the volume.

Procedure

1. Press the **More..** soft key and navigate to and press the **Config** soft key.
2. Navigate to **Ring Tone** and press **Select**.

The handset lists the current available tone types, identified from **Tone A** to **Tone F**.

3. Navigate the list of tone types using the **Next** and **Prev** soft keys and select one using the **Select** soft key.

Select **Back** if you want to return to the previous menu.

Related links

[Language](#) on page 19

Alpha dialing

To eliminate the need to press the **abc** and **123** soft keys when you enter text, you can configure the D160 dialpad to default to alphabetic mode. Please note that IP Office does not yet support alpha dialing.

Use the following procedure to enable or disable alpha dialing mode on the D160 handset.

Procedure

1. Press the **More..** soft key twice and then press the **Config** soft key.
2. In the **User Settings** menu, navigate to **Alpha Dialing** using the **Next** and **Prev** soft keys and press **Select**.

The first line on the display indicates the status of the current setting. The second line on the display lists the soft key options to enable or disable alpha dialing.

3. Press the **Next** or **Prev** soft keys to toggle between **On** or **Off** and press **Select**.

Related links

[User settings](#) on page 16

Configuring the prefix dial number list

When making a call from the directory or the call log, you might want to add a prefix dial number in order to avoid the repetitive re-entry of those prefix digits each time you make a call. You can view the prefix dial numbers that are available to you as a list on the handset when you make a call. For more information, see [Making a call from the directory](#) on page 36 and [Making a call from the call log](#) on page 33.

Procedure

1. In the **User Settings** menu, navigate to **Prefix Dialing** using the **Next** and **Prev** soft keys and select it using the **Select** soft key.

A list of eight dialing prefixes appears on the display. If a list entry is blank, that entry does not have a registered prefix dial number.

2. Select a prefix to enter edit mode. If you press **Back** you will return to the main menu.
3. In edit mode, enter the prefix dial number and press **OK**. The flashing cursor indicates the location of data entry. The **<<** and **>>** soft keys will move the cursor in that direction. The **Del** soft key deletes the number where the cursor is located. Deleting all the keys allows you to de-register a prefix slot.
4. Press the **Yes** soft key to confirm the change and proceed to the next step. Press the **No** soft key to decline the change and exit edit mode.

When you press **Yes**, the handset emits a confirmation tone and the display reads **Saved** for three seconds before returning to the main menu.

Related links

[User settings](#) on page 16

Codec

You can view the current codec setting using the following procedure.

Procedure

1. Navigate to the **User Settings** menu as above.
2. Navigate to **Codec** using the **Next** and **Prev** soft keys and select it using the **Select** key.
The handset display shows the current codec setting. For example, **Codec: G.711**.
3. Press the **Back** soft key to return to the main menu.

Related links

[User settings](#) on page 16

Time format

Use the following procedure to change the time format.

Procedure

1. In the **User Settings** menu, use the **Next** and **Prev** soft keys to navigate to **Time Format** and press **Select**.

The handset display lists the patterns of time display, which are as follows:

- 12:00am
- 24:00

2. Navigate the list of time formats using the **Next** and **Prev** soft keys, and select one using the **Select** key.

The handset requests confirmation.

3. Press the **OK** soft key to continue, or press **Back** to exit menu mode.

When you press **Yes**, the handset emits a confirmation tone and the display reads **Saved** for three seconds before returning to the main menu.

Related links

[User settings](#) on page 16

Date format

Procedure

1. In the **User Settings** menu, use the **Next** and **Prev** soft keys to navigate to **Date Format** and select it using the **Select** soft key.

The handset displays the four patterns of date display, which are as follows:

- **MM/DD HH:MM** (default)
- **DD/MM HH:MM**
- **HH:MM MM/DD**
- **HH:MM DD/MM**

(M/D = Month/Day; H/M = Hour/Minute)

2. Navigate the list of formats using the **Next** and **Prev** soft keys, and select one using the **Select** key.

The handset requests confirmation.

3. Press the **Yes** soft key to continue. Press **No** to exit menu mode.

When you press **Yes**, the handset emits a confirmation tone and the display reads **Saved** for three seconds before returning to the main menu.

Related links

[User settings](#) on page 16

Function key label

Function key labels identify function key programming prior to activating the programmed feature. To learn how to use a function key, refer to [Using function keys](#) on page 44.

Note that when you enable function key labels they require you to press a programmed button *twice*, once to verify the correct label, and again to activate that feature.

See your administrator if you have issues enabling or disabling function key labels.

Procedure

1. In the **User Settings** menu, use the **Next** or **Prev** soft keys to navigate to **Function Key Label** and press **Select**.

The handset display shows the current function key label status.

2. Press the **Next** soft key to choose between **Function Key Label On** or **Function Key Label Off** and press **Select**.

After making your selection, the handset emits a confirmation tone and shows a status message for three seconds before returning to the main menu.

Related links

[User settings](#) on page 16

Language

Currently, the D100 supports five languages: English, French, German, Italian, and Spanish. The default is English. You can change the handset language using the following procedure.

Procedure

1. In the **User Settings** menu, use the **Next** or **Prev** soft keys to navigate to **Language** and press **Select**.
2. Navigate to the desired language using the **Next** and **Prev** soft keys and press **Select**. Press the **Back** soft key at any time to return to the previous menu.

The display reads **Saved** in the chosen language and then returns to the main menu.

Related links

[User settings](#) on page 16

Administrator settings

Press the **More..** soft key twice and press the **Config** soft key to access the **Administrator Setting** menu.

The **Administrator Setting** menu has configurable options and lists of information which only an administrator can reach. Entering the menu requires the use of an administrator password.

Related links

[Configuration overview](#) on page 15

Network

Press the **More..** soft key twice and press the **Config** soft key to access the **Network** menu.

In the **Network** menu, you can view various network parameters in read-only mode. You can only edit the network settings if you correctly enter the administrator password when prompted.

The following submenus are available under the **Network** menu:

- MAC Address
- SIP Controller

Configuration

- IP Address
- Subnet Mask
- DHCP Setting
- Default Gateway
- Ping Reply Setting
- Destination Unreachable
- Ethernet Information
- Statistic Information

Any change to a network parameter requires you to reboot the base station, otherwise the change will not take effect.

- [Hot desking](#) on page 27
- [Conference calls](#) on page 27
- [Operating calls on the charger](#) on page 27
- [Dialing the previous call](#) on page 28
- [Voicemail](#) on page 28

Emergency calls

You can make emergency calls even when no user is logged in. The handset forwards the call to the base station and the base station uses the emergency call credentials to log into IP Office and pass the call. IP Office then determines whether to reject or to allow the call.

Please note that the emergency number varies depending on your region.

Avaya does not take responsibility for the consequences of emergency calls dialed correctly or otherwise.

Procedure

1. Dial the emergency number using the keypad and press the **Send** soft key or the **Off-Hook/ Handsfree** button. You must determine the appropriate emergency number for your area.

As the base station communicates with IP Office, the handset display reads **Calling:** followed by the number dialed.

When the remote connection is complete, the handset switches to talk mode.

2. When the call is complete, hang up using the **On-Hook** button.

The handset returns to the Idle, logged-out state.

Related links

[Call operation overview](#) on page 22

Making calls

The outgoing call feature lets you place internal and external calls alike.

Procedure

1. To pre-dial the number, enter the extension number on the D160 keypad and press the **Send** soft key or the **Off-Hook/Handsfree** button. Alternatively, you can place the call by pressing the **Off-Hook** button first, then dialing and sending the number.

In either case, the handset begins to communicate to the base station and the display reads **Calling**: followed by the number dialed. If you do not press any button for 30 seconds, the handset display returns to the Idle state.

When the recipient answers the call, your handset switches to Talk mode.

2. When the call is complete, hang up using the **On-Hook** button.

Related links

[Call operation overview](#) on page 22

Receiving calls

The D160 handset enters the incoming call mode whenever the base station registers an incoming call. The handset display indicates this mode. Answer or decline the call as follows.

Procedure

1. With a call ringing, press the **Off-Hook** button, **Answer** soft key or any key on the keypad to answer.

The handset goes to talk mode and the display shows a talk icon. The handset then lists the line information received from IP Office.

2. With a call ringing, you can press the **Ignor** soft key to ignore the call and return the handset to the Idle state.

IP Office treats the call as an unanswered call, sending it to your forward on no answer destination if set, else to voicemail..

Related links

[Call operation overview](#) on page 22

Holding calls

The following procedure explains how to hold calls on the D160 handset. For information on holding and switching between multiple calls, see [Handling multiple calls](#) on page 24.

Procedure

1. During talk mode, press the **More.. > Hold** soft keys to place the call on hold.
The base station switches the call to a held state while the handset display indicates the new mode. The caller remains in talk mode, muted, and receives a hold alert tone or music, depending on the IP Office configuration.
2. To remove the call from hold, press the **More.. > Activ** (Activate) soft keys.
3. To make a new call while holding a call, press the **Off-Hook** key and dial the number. Pressing the **Off-Hook** key in this situation does not remove any other call from a held state. The handset acts as though you are making a regular call.

Related links

[Call operation overview](#) on page 22

Handling multiple calls

You can operate multiple calls using the D160 handset. The handset display shows the call information in the order that the calls were received. The call line indicates the information about each call, such as Hold or From. The soft key menu at the bottom of the handset display selects and manages these calls.

Press the **More..** soft key to view all the options when handling calls.

Related links

[Call operation overview](#) on page 22
[Switching between calls](#) on page 24
[Multiple incoming calls](#) on page 25

Switching between calls

When switching between calls, be aware of the calls you want to hold and the calls you are prepared to dismiss.

Procedure

1. To switch between calls, press the **Calls** soft key.
The call list will appear on the handset display with appropriate soft keys for each call.
2. Navigate the call list using the **Next** and **Prev** soft keys.

3. Select the call you want to switch to by pressing the **Activ** (Activate) soft key, or place a new call by pressing the **New** soft key.

IP Office places any existing active call on hold.

Related links

[Handling multiple calls](#) on page 24

Multiple incoming calls

A single handset can handle up to five simultaneous calls. Depending on whether or not a current call is active, the procedure for handling multiple calls might differ.

Procedure

1. If no call is active and multiple calls are incoming, access the list of calls using the **Calls** soft key. You also use the **Calls** soft key to navigate the call list.
2. Activate an incoming or held call using the **Activ** (Activate) soft key.

The handset display shows the call information for the active call.

3. If you are on a call and an additional call is incoming, the handset display replaces the current call information with that of the incoming call. The handset is still in talk mode, but the user can press the **Answr** (Answer) soft key to place the current call on hold and answer the incoming call. Otherwise, the user can press the **Ignor** (Ignore) soft key.

* Note:

If you receive a new call while operating the Feature mode, the incoming call information interrupts and replaces the Feature mode display.

Related links

[Handling multiple calls](#) on page 24

Transferring calls

You can make both attended and unattended call transfers to an extension using the D160 handset. The difference between an attended call transfer and an unattended call transfer is that an attended call transfer lets you consult with the transfer recipient, which lets the recipient approve or decline the transfer before it occurs. An unattended call transfer does not involve consultation.

Related links

[Call operation overview](#) on page 22

[Attended call transfer](#) on page 25

[Unattended call transfer](#) on page 26

Attended call transfer

Use the following procedure to transfer a call while ensuring with the recipient that the call transfer is acceptable.

Procedure

1. Place the current call on hold using the **More.. > Hold** soft keys. Alternatively, press the **Trnsfr** (Transfer) soft key. The call is automatically put on hold.
2. Enter the desired extension using the keypad and press the **Trnsfr** soft key.

The display prompts the operator to consult with the transfer recipient.

3. For an attended call transfer, press the **Yes** soft key. Select **Cancel** to return to the held call.

During a successful transfer, the handset returns to the Idle state and both extensions connect to one another. The handset of the operator reads **Call Transferred** before returning to the Idle state.

Related links

[Transferring calls](#) on page 25

Unattended call transfer

The first two steps of an unattended call transfer are identical to that of an attended call transfer. The difference is that an unattended call transfer declines the option to consult with the call transfer recipient.

Procedure

1. Place the current call on hold using **More.. > Hold**. Alternatively, press the **Trnsfr** (Transfer) soft key to automatically place the current call on hold.
2. Enter the desired extension using the keypad and press the **Trnsfr** soft key.

The handset display prompts the operator to consult with the transfer recipient.

3. For an unattended call transfer, press the **No** soft key. Select **Cancel** to return to the held call.

During a successful transfer, the handset returns to the Idle state and connects the held extension and the transferred extension. The handset of the operator reads **Call Transferred** for three seconds before returning to the Idle state.

Related links

[Transferring calls](#) on page 25

Speed dialing

Use the following procedure to call a number using speed dial. For information on configuring a speed dial button, see [Configuring speed dials](#) on page 43.

Procedure

Press the feature key for the speed dial number that you want to dial.

The handset display shows the label for that speed dial and the D100 processes the call.

Related links

[Call operation overview](#) on page 22

Hot desking

You can hot desk to a D100 extension using Softphone and the associated user name and password, or you can hot desk to a D100 extension from a SIP or H323 extension by way of the Extension Login feature (**ELogIn**). Similarly, on a D100 extension, you can hot desk from the D160 handset to a SIP or H323 extension using the same feature.

Note that you can program function keys on the D160 to serve as Extension Login (**ELogI**) and Extension Logout (**ELogO**) buttons. See [Button programming](#) on page 41.

Related links

[Call operation overview](#) on page 22

Conference calls

During an active call, you can access the conference call feature using the **Conf** (Conference) soft key. During a conference, the following soft key options are available:

- **Hold**: When a conference participant presses **Hold**, only the involvement of the participant is put on hold, muting the audio for that participant.
- **Featur**: Press the **Featur** soft key to access the call features list.

Procedure

1. With a call active and while in Talk mode, press **More.. > Conf**.

The current active and held calls become the conference participants. The handset display shows the conference information.

2. Press the **Hold** or **Featur** soft keys as desired.
3. To exit the conference, press the **On-Hook** button. When a participant presses **Exit**, only the participant leaves the conference.

Related links

[Call operation overview](#) on page 22

Operating calls on the charger

It is possible to make and receive calls while the handset is in the charger. Calling and connecting still functions without being terminated and all keys and soft keys will also still function.

Removing the handset from the charger while a call is active does not result in call termination.

Making and receiving calls

You can make calls on the handset in the normal way, even though the handset is charging. If you receive a call while the handset is in the charger, the handset switches to the incoming call mode. The handset then shows the call on the display.

To make the call, press the **Off-Hook** key or the **Answer** (Answer) soft key. Operation of the handset does not change when you place the handset in the charger.

Auto-answer incoming call

If your extension is configured for internal auto-answer, your handset automatically accepts all internal calls. On receiving a call, you hear a short attention tone and then you can speak to the caller immediately without pressing any key and without picking up the handset, whether or not you placed the handset in the charger. When the caller terminates the call, you can take a new call immediately.

Related links

[Call operation overview](#) on page 22

Dialing the previous call

You can use the standard redial feature to dial the most recently dialed number, as determined by IP Office.

Procedure

1. From the Idle screen, press the **Redial** soft key.
The base station connects to IP Office to determine the last number dialed.
2. The handset dials the number determined by IP Office, making the call in a regular manner.

Related links

[Call operation overview](#) on page 22

Voicemail

Valid users can access voicemail on the handset by pressing the **Msgs** (Messages) soft key after logging in. The device must connect to IP Office, otherwise you cannot access the IP Office voicemail messaging system.

Procedure

1. From the Idle state, press the **Msgs** soft key.
The D100 connects to the IP Office voicemail system.
2. Follow the audio instructions that the IP Office voicemail system provides.
3. Press the **On-Hook** key at any time to exit.

Related links

[Call operation overview](#) on page 22

Chapter 6: Miscellaneous options

Mute

Pressing the **Mute** key mutes your handset or the headset microphone while you are on a call. You cannot mute confirmation or error tones.

Procedure

1. During a call, press the **Mute** key to mute the microphone.
2. Press the **Mute** key again to cancel the mute mode.

Ending a call also cancels the mute mode.

Time display

In the Idle state, you can view the current time using the following procedure.

Procedure

1. In the Idle state, press the **More..** soft key to access the **Time** soft key option.
 2. Press the **Time** soft key to show the current time for five seconds.
 3. You can press the **Back** soft key to return to the Idle display before the five second timeout occurs.
-

Handsfree

While on a call, you can switch between the Handset mode and the Handsfree or Headset modes using the **Off-Hook/Handsfree** key. The following speaker icon shows on the display while the Handsfree mode is active:

Speaker volume

Adjust the handset speaker volume using the **Up** and **Down** keys on the side of the handset. The handset and the headset have separate volume level settings. When you press the **Up** or **Down** keys during a call, the handset display shows the current volume level.

If you receive a message from IP Office while you are setting the volume, it appears after displaying the volume level.

Ringer volume

Use the following procedure to change only the ringer volume. If you want to change the ringer volume while a call is incoming, you can use the same procedure but the handset does not display the setting. The handset continues to display the incoming call information.

To change the ring tone, see [Changing the ring tone](#) on page 15.

Procedure

1. In the Idle state, press the **Up** or **Down** keys on the side of the handset to enter the Ringer Volume Setting mode.
2. Continue to press **Up** or **Down** to increase or decrease the ringer volume accordingly.

The following settings are available:

- **Low:** The handset emits a quiet ring tone.
 - **Middle:** The handset emits a medium level ring tone.
 - **High:** The handset emits a loud ring tone.
 - **Vibrate:** The handset vibrates rather than emitting a ring tone, unless the handset is in the charger, in which case the ring tone rings Low.
 - **Off:** The ringer is muted.
3. When you are satisfied, allow the handset to display the volume setting without pressing any keys. Pressing either the **On-Hook** key or the **Off-Hook/Handsfree** key cancels the Ringer Volume Setting mode.

Chapter 7: Call logs

Three types of call log are available on the D100:

- Missed calls
- Received calls
- Outgoing calls

You can access the call log from the Idle state by pressing **More.. > CLog**.

The base station can log up to 100 calls per handset. The 100 calls includes missed, received, and outgoing calls combined.

Related links

[Viewing the call log](#) on page 32

[Saving a contact from the call log](#) on page 33

[Deleting call logs](#) on page 34

Viewing the call log

The following procedure explains how to view the log for calls received (**Rcvd**), calls missed (**Missed**), and calls made (**Called**). Each call log contains the name and phone number of the contact and the time the call was made.

Procedure

1. In the main menu, navigate to **CLog** using the **More..** soft key and press **Select**.
2. Select **Missed**, **Rcvd**, or **Called**.

The handset display lists the calls received, missed, or made based on your selection. The calls are displayed in order, starting with the most recent.

If there are no logs saved on the base station for the selected call log, the display reads **No Entries** for three seconds before returning to the main menu.

Press **Back** at any time to return to the previous menu.

3. Navigate the list using the **Next** and **Prev** soft keys. View the details of any call in the log using the **Select** soft key.

Next steps

When viewing an individual call log, you can perform any of the following functions using the appropriate soft key:

- **Send:** Dials the contact.
- **Save:** Saves the contact to the local directory.
- **Del:** Deletes the call log entry.
- **View:** Shows the call number.
- **Prefix:** Prompts the selection of a dialing prefix.
- **Back:** Returns to the previous menu.

Related links

[Call logs](#) on page 32

Making a call from the call log

You can make calls from the call log using the following procedure.

Procedure

1. Navigate to the desired call log using the **Next** and **Prev** soft keys and select the entry you want to call using the **Select** soft key.

The handset display shows the call information for that entry.

2. Press the **Send** soft key to call the number on the display. You can press **More.. > Prefix** to add a prefix to the number, such as '9' to access an outside line, or press the **Exit** soft key to quit and return to the main menu.

You can also make a call from the call log list by selecting an entry and pressing the **Off-Hook/Handsfree** key.

While sending the call information to the base station, the handset display reads **Calling:** followed by the call information. You can then operate the call as you normally would.

Related links

[Call logs](#) on page 32

Saving a contact from the call log

You can save a contact from the call log into the local directory using the following procedure.

Procedure

1. Navigate the call log list using the **Next** and **Prev** soft keys and select the entry you want to call using the **Select** soft key.

The handset display shows the call information for that entry.

2. Press the **Save** soft key to save the selected caller's name and number into the local directory. Press the **On-Hook** key to cancel the save and return to the main menu.

The handset requests confirmation.

3. Press the **Yes** soft key to save the user information. Press the **No** soft key to reject the save and return to the main menu.

If you select **Yes**, the handset display reads **Saved** for three seconds before returning to the call log list.

The display reads **Failed** if the user already exists in your local directory and you attempt to overwrite the entry.

Related links

[Call logs](#) on page 32

Deleting call logs

You can delete call logs using the procedure below. You can delete the logs individually or by group.

Procedure

1. From the **CLog** menu, select the call log group you want to delete call logs from. You can delete individual call logs, all the call logs from a specific group, or all the call logs from all the groups.
 - To delete a single call log from a single log group, select either **Missed**, **Rcvd**, or **Called**, depending on the log, and proceed to step 2.
 - To delete *all* the call logs from a single log group, select **Del**. The handset displays soft key options for each log group. Select a log group, and proceed to step 4.
 - To delete *all* the call logs from *all* the log groups, select **Del > All** and proceed to step 4.
2. Locate the call log you want to delete using the **Next** and **Prev** soft keys and select the item using the **Select** soft key.
3. Delete the call log by pressing the **Del** soft key.

The handset requests confirmation.
4. Press the **OK** soft key to delete the selected call logs. Press the **Back** soft key to return to the previous menu.

Related links

[Call logs](#) on page 32

Chapter 8: Directory

There are two directories available on the D100: global and local. The global directory downloads from IP Office and cannot be changed. The local directory is configured by the user logged in on the handset.

The maximum number of global directory entries is 100 per base station. The maximum number of local directory entries is 100 per handset.

You can access the directories by pressing **More.. > Dir**. In the **Contacts** submenu, the **My** soft key accesses the local directory and the **System** soft key accesses the global directory.

Related links

[Contact list](#) on page 35

[Making a call from the directory](#) on page 36

[Adding contacts](#) on page 36

[Deleting contacts](#) on page 37

[Editing a contact](#) on page 37

[Searching the directory](#) on page 38

Contact list

The contact list includes global and local directory entries in alphabetic order. Each entry contains the user name and phone number. The entries are not case-sensitive.

While navigating the contact lists, note the following:

- Pressing a number key on the dialpad jumps to the contact name that starts with the first letter associated with the key.
- Pressing the same number key again jumps to the contact name associated with the second letter associated with the key.
- Pressing a different number key jumps to the contact name that starts with the first letter associated with the new key.

Procedure

1. In the Idle state, press **More.. > Dir**.
2. Select the **My** soft key to view the local directory.

Select the **System** soft key to view the global directory.

3. Use the **Next** or **Prev** soft keys to navigate the list of contacts.

Select a contact using the **Select** soft key. For more information, refer to the following sections.

Related links

[Directory](#) on page 35

Making a call from the directory

Use the following procedure to make calls directly from the local or global directories.

Procedure

1. Select either a local or global directory entry from the **Contacts** menu using the **Select** soft key.

The handset displays the entry information.

2. Press the **Send** soft key to make a call to the selected contact. If you want to add a prefix dial number, press the **Prefix** soft key instead.

Press the **Cancel** or **Back** soft keys to return to the main menu.

While sending the call information to the base station, the handset display reads **Calling:** followed by the contact's call number. You can then operate the call as you normally would.

Related links

[Directory](#) on page 35

Adding contacts

You can only add contacts to the local directory. Use the following procedure to add contacts.

Procedure

1. In the Idle state, press the **Dir** soft key.
2. Select either the local (**My**) or global (**System**) directory.
3. Press the **More..** soft key followed by the **New** soft key.

The display prompts you to enter user information.

4. Enter the user name and press the **OK** soft key.

The **>>** soft key moves the cursor forward. The **Del** soft key performs a backspace on the previous letter.

5. Enter the phone number or extension of the user and press the **OK** soft key again. Pressing the **Back** soft key returns you to the previous menu.

The handset requests confirmation.

6. Press the **Save** soft key to confirm the entry request.

The handset emits a confirmation tone and the display reads **Saved** for three seconds.

Press **Cancel** to return you to the main menu. Press **Back** to return to the previous menu.

Related links

[Directory](#) on page 35

Deleting contacts

You can only delete contacts from the contact list in the local directory. You can delete contacts individually or all at once.

Procedure

1. Select a directory entry from the Directory menu.

The handset displays the contact information.

2. Press the **Del** soft key to delete the contact.

The handset requests confirmation.

3. Select one of the following:

- Press the **OK** soft key to delete the selected contact from the directory.
- Press the **Back** soft key to exit without deleting any contacts.
- Press the **All** soft key to delete all the contacts.

If you choose to delete contacts, the handset requests confirmation. Once confirmed, the handset display reads **Deleted** for three seconds before returning to the address list.

Related links

[Directory](#) on page 35

Editing a contact

You can only edit contacts saved in the local directory. Use the following procedure.

Procedure

1. Select a directory entry from the Directory menu.

The handset display provides the entry information.

2. Press **More.. > Edit** to enter Edit mode.

The display prompts you to edit the user information.

3. If necessary, edit the user name and press the **OK** soft key.

The **>>** soft key moves the cursor forward. The **Del** soft key performs a backspace on the previous letter.

4. If necessary, edit the phone number or extension of the user and press the **OK** key again. Use the **abc** or **123** soft key to alternate between alphabetic input mode and numeric input mode.

The handset requests confirmation.

5. Press the **Save** soft key to confirm the edit. The handset emits a confirmation tone and the display reads **Saved** for three seconds.

Press the **Back** soft key to return to the previous menu.

Related links

[Directory](#) on page 35

Searching the directory

You can search the local and global directories using the following procedure.

Procedure

1. Navigate to the desired Directory (local or global) and press the **Search** soft key.
2. Enter contact information to search the given directory for users with identical or similar names or extensions.
3. Press the **OK** soft key to begin the search.

Once the search is complete, the display shows the matching entries. For multiple search results, the best match appears at the top of the list.

[Directory](#) on page 35

Chapter 9: Features

The D100 base station supports the Feature key functionality of IP Office.

You can access features by pressing the **Featur** (Feature) soft key and then selecting the desired feature. For each selected feature, follow the instructions on the screen.

Note that the Feature key option is only visible when Idle, on a call (active), on hold, or pre-dialing. It is not visible while dialing, while navigating the menu, or during an incoming call.

The following table lists the features available.

Feature	Details	Feature label
Account Code Entry	Enter an account code, up to 15 digits, for an incoming or outgoing call currently being handled.	Acct
After Call Work	Provide an interval of time between ending one call and receiving another hunt group call. Note that your system administrator configures the interval of time.	ACWrk
Automatic Callback	Set an automatic callback for a user that you have called but who has not answered. When the user next ends a call, the telephone system calls you and when you answer the system automatically makes a call to the user.	AutCB
Automatic Intercom	Call another extension and have the call automatically answered on handsfree after playing three beeps. If the called extension does not have a handsfree microphone, the user must use the handset if they want to talk. If the called extension does not support a handsfree speaker or is not free when called, the call becomes a normal call.	IAuto
Button Programming	The button programming feature lets you program function keys on the handset to activate the available IP Office features. For more information, see Button programming on page 41.	BtnPg
Button Query	Use the Button Query feature to query any of the programmable keys to identify the function that has been assigned to that key.	BtnQy

Table continues...

Features

Feature	Details	Feature label
Call Pickup Any	Use the Call Pickup Any feature to answer any intercom, transferred, or outside call ringing at another specified extension.	PickA
Call Park	As an alternative to placing a call on hold, you can park a call on the system where it can be retrieved by another user. Using Call Park does not tie up a line, because the call is held on the IP Office call server.	CPark
Call Record	Where IP Office has Voicemail Pro installed, you can record a call and save the recording to the user's mailbox, a group mailbox, or the voice recording library.	CRec
Conference Meet Me	Use the Conference Meet Me feature to place calls on hold and create conferences using either the phone or desktop applications. Additional conference members may be added, however a single conference may not have more than 64 members.	CnfMM
Directed Call Pickup	Use the Directed Call Pickup feature to access a ringing call, a held call, or a call in progress. You can select a line that is not assigned to your phone.	DPkUp
Do Not Disturb	Do Not Disturb lets you temporarily stop incoming calls from ringing at your device. This feature also prevents the user from receiving hunt group calls. The system gives direct callers either voicemail, if enabled, or a busy signal. This feature can be enabled/disabled from the phone or using IP Office Manager.	DND
Extension Login, Extension Logout	Use the Extension Login and Logout features to log in and out of an extension.	ELogI, ELogO
Follow Me Here, Follow Me To	The Follow Me feature gives mostly the same behaviors as the user's home phone (Paging, hands free answer, etc.), whereas Forwarding does not. Follow Me is typically used when a user is going to be working away from their desk, for example in a workshop.	Here+, FolTo
Forward All	The Forward All feature forwards a user's calls to another extension or external number such as a mobile or cell phone. You can forward a call in a number of ways and if the call is not answered at the forward destination, it will go to IP Office voicemail, if enabled.	FwdAl

Table continues...

Feature	Details	Feature label
Group Page	Use the Group Page feature to make a page call to a group.	GrpPg
Group Pickup	Use the Group Pickup feature In a pickup group. Each member can answer another member's calls.	PickG
Private Call	Use the Private Call feature to set the status of a call to private. Private calls cannot be recorded, intruded upon, bridged into, or monitored.	PrivC
Relay On, Relay Pulse	IP Office is fitted with two independent switch outputs for controlling external equipment such as door entry systems. The Relay On and Relay Pulse features on the handset toggle switches to be opened, closed, or pulsed, as required.	Rely+, Relay
Remote Park	Like Call Park, the Remote Park feature lets you remotely park calls.	RPark
Retrieve Call	The Retrieve Call feature lets you retrieve parked calls.	RCall
Stamp Log	Your system maintainer may ask you to use Stamp Log to place a mark in the telephone system logs when a problem occurs.	Stmpl
Twinning	When twinned, calls to your phone also ring at an external number that you can set. You can answer the call on either phone. Pressing the key show shows a menu to set the external number and to enable twinning. Select again to switch twinning off or change the twinning number. If assigned to a programmable button, the button is red whilst twinning is enabled.	Twin

Button programming

Using the button programming feature, you can program function keys on the D160 handset to perform feature operations with the pressing of a single function key. Use the following procedure to program the function keys that activate the available features. Note that if you do not press any button for 60 seconds, a timeout activates and forces you out of Feature mode.

The following IP Office features are available for button programming from the telephone. For more detailed information on each feature, see [Features](#) on page 39. In addition to the available IP Office features below, the system administrator can program a range of other features using IP Office Manager or IP Office Web Manager.

- Account Code Entry
 - After Call Work
 - Automatic Callback
 - Automatic Intercom - Dial voice call
 - Call Pickup Any
 - Call Park
 - Call Record
 - Conference Meet Me
 - Directed Call Pickup
 - Do Not Disturb
 - Extension Login/Logout
 - Follow Me Here/To
 - Forward All
 - Group Page
 - Group Pickup
 - Private Call
 - Relay On/Pulse
 - Remote Park
 - Retrieve Call
 - Stamp Log
 - Twinning
 - Voicemail
- **Speed Dial:** See [Configuring speed dials](#) on page 43.

Procedure

1. In the Idle state, press the **Featur** (Feature) soft key.
The handset enters Feature mode.
2. Press the **More..** soft key to cycle through the menu options and select the **BtnPg** soft key.
The handset display prompts you with **Button Programming?**
3. Select **Yes** to continue with button programming. Select **No** or **Quit** to return to the previous or main menu.
If you selected **Yes**, **Button Programming** displays on the handset for one second, followed by **Select a button>**.
4. Press the function key that you want to assign a feature to. Selecting an invalid key results in the display message **Invalid Input**. If you select a function key that contains previous programming, you will be presented with the **Erase/Edit** option.
 - If you choose **Erase**, you will be prompted to **Erase button?**
Select **Yes** to clear the programming for the selected function key. Note that this will return you to the main menu in an Idle state.
 - If you choose **Edit**, a dialog prompts you to enter the required information.
Enter the information and proceed to step 5.
5. In the **Select feature** menu, use the **More..** soft key, if necessary, to navigate to the feature you wish to program and select it using the corresponding soft key.

6. Press **Yes** or **No** as desired and follow the instructions on the display.

After the base station notifies IP Office of the button programming and IP Office responds, the handset display reads **Button programmed**.

Configuring speed dials

The speed dial feature lets you save dial numbers for easier and quicker use in the future. You can program a function key for the speed dial feature using button programming. While configuring button programming, note that you must specify the phone number that you wish to speed dial, meaning that you can only configure one phone number for speed dial per button.

Procedure

1. In the Idle state, press the **Featur** (Feature) soft key.
The handset enters Feature mode.
2. Press the **More..** soft key to cycle through the menu options and select the **BtnPg** soft key.
The handset display prompts you with **Button Programming?**
3. Select **Yes** to continue with button programming. Select **No** or **Quit** to return to the previous or main menu.
If you selected **Yes**, **Button Programming** displays on the handset for one second, followed by **Select a button>**.
4. Press the function key to which you want to assign a feature. Selecting an invalid key results in the display message **Invalid Input**. If you select a function key that contains previous programming, you will be presented with the **Erase/Edit** option.
 - If you choose **Erase**, you will be prompted to **Erase button?**
Select **Yes** to clear the programming for the selected function key. Note that this will return you to the main menu in an Idle state.
 - If you choose **Edit**, a dialog prompts you to enter the required information.
Enter the information and proceed to step 5.
5. In the **Select feature** menu, use the **More..** soft key to navigate to **SpdDI** select it using the corresponding soft key.
6. The display prompts you for confirmation. Press **Yes** to continue.
7. Enter the number you wish to speed dial and press **Next**.
8. Enter a label for the speed dial and press **Done**.

After the base station notifies IP Office of the button programming and IP Office responds, the handset display reads **Button programmed**.

Using function keys

The following procedure describes how to use a function key in order to access its assigned feature. To configure and label function keys, see [Button programming](#) on page 41 and [Function key label](#) on page 18.

Procedure

In the Idle state, press the desired Function key.

- If you disabled function key labels, pressing a function key activates the programmed feature immediately. No further action is required.
- If you enabled function key labels, the handset displays the feature label for three seconds and you must press the function key again to activate the feature that is displayed. Pressing a different function key displays its feature label instead. Enabling function key labels allows you verify that you are using the correct button.

Note that the handset returns to the Idle state if the menu auto timeout occurs before you select a function key.

Busy Lamp Field (BLF)

An administrator can configure function keys on the handset to work as Busy Lamp Fields (BLFs). They do this using IP Office Manager or IP Office Web Manager. The User BLF function cannot be programmed from the handset.

When there is a call to a monitored user, the corresponding function key flashes during ringing. When the user answers the call, the BLF key stops flashing and turns on. When a BLF key is turned off, this means that the phone is in an Idle state, not Active or on a call.

You can pick up a call activating the BLF by pressing the corresponding function key. When there is no call activating the BLF, pressing the BLF key speed dials that extension.

For information on configuring function keys, see [Features](#) on page 39. Note that if you program a feature for the same function key used by the BLF you will overwrite the BLF function set by the administrator.

Avaya one-X® Portal feature support

The D100 supports the key features found in the Avaya one-X® Portal interface. For more information, see http://marketingtools.avaya.com/knowledgebase/user/ipoffice/mergedProjects/manuals/manuals/apps/ip_office_portal_en.pdf.

A permanent phone extension is typically associated with your extension number. You can use that phone extension to make and answer your calls regardless of whether you have Avaya one-X® Portal for IP Office running or not. Hot desking allows you to assume control of another phone extension so that it uses your extension number and phone system settings.

Normally, logging in at another extension requires you to dial a special number including your login code that is different from the password you use for IP Office applications. However, you can use the Avaya one-X® Portal login menu to both login to Avaya one-X® Portal and to specify the D100 extension on which you want to be logged.

When you use this method to log in to both Avaya one-X® Portal and a D100 extension, when you log out of Avaya one-X® Portal you are also logged off the D100 extension. Your extension number returns back to your normal phone extension if you have one and it is not in use by another hot desking user. If you don't have a normal extension or it is not available, you are treated as being logged off from the phone system and your calls go to voicemail, if available.
